Personal Statement

Final year student in computer science with a good programming foundation gained from the university programme and personal projects looking to explore software development. A recognised graduate role would allow me to put my enthusiasm and skills into practice and hopefully develop a long and successful career with a reputable company. With excellent communication skills backed by my work experience combining with my technical background, I believe to be a perfect candidate.

Education

BSc Computer Science | 2017 – Current | University of Essex

Dissertation topic: Privacy preserving mechanisms in the release of healthcare data

Relevant modules: Advanced programming | Artificial intelligence | Web application development | Network security | Evolutionary computation and genetic programming

A-Levels | 2015 – 2017 | Cadbury College, Kings Norton, West Midlands

Computer Science – D | Business Studies – B | Mathematics – D | Russian – A

GCSE | 2013 – 2015 | Harborne Academy, Birmingham, West Midlands

1 x A* | 2 x A (including Mathematics) | 3 x B | 2 x C (including English)

Hobbies & Interests

In my free time I like to keep up with the latest technologies. I regularly watch videos and listen to podcasts about programming and new discoveries in the world of tech which in turn allows me to practice this new knowledge by working on various personal projects such as Amazon clone and ToDoist clone (refer to my own website above). I also like to practice my programming skills on websites such as HackerRank and ProjectEuler. In addition, I enjoy playing sports especially team games such as football. I also regularly attend gym to stay healthy. Finally, I recently came across a new hobby being djjing linked to my love for music.
